ASCE Node Mapping

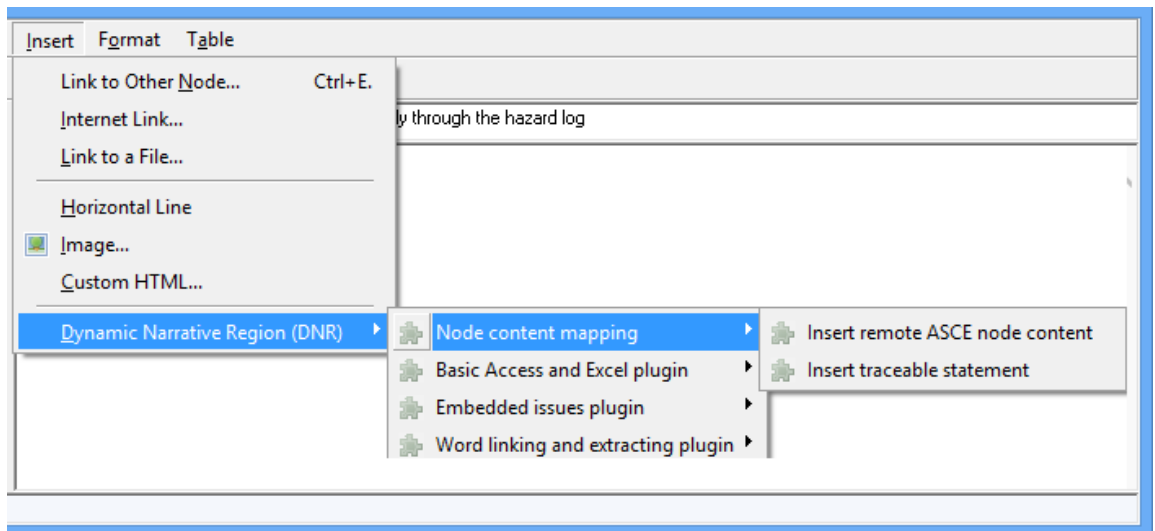

Plugin Manual for ASCE 4.2

- File name: Asce node mapping v0.2.xml
- Version: 0.2.19
- Applies to: All networks

1 Description

A DNR plugin for inserting content from other ASCE networks

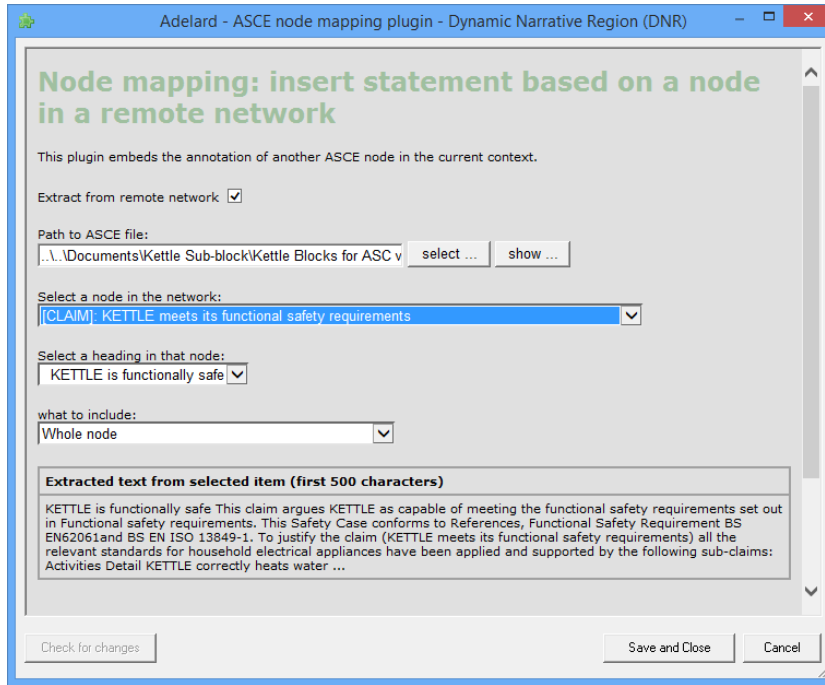

This plugin provides two DNRs, which may be accessed via the Insert-DNR menu within the ASCE Node editor:

This plugin works with the one click export plugin "remove DNR containers" feature.

2 Remote ASCE Node insertion DNR

This DNR allows you to insert the content of a node in a different ASCE network into the narrative of a selected node. This provides a powerful reporting as higher level ASCE networks can include content from subsidiary networks

3 Traceable statement DNR

This DNR allows you to insert a statement into your narrative that is formally linked to content in a node in an ASCE network.
