

# GSN Auxilliary Functions

## Plugin Manual for ASCE 4.2

- File name: gsn auxilliary functions v0.2.xml
- Version: 0.2.7
- Applies to: GSN networks only

### 1 Description

This plugin provides two functions via a context menu for elements in GSN networks:

- Show all the applicable Models, Context and Assumptions that are "in scope" according to a common interpretation of GSN networks which states that all Model, Context and Assumption nodes that are connected to parent goals are considered "in scope" for the current node.
- Show supporting solutions - shows a list of solution nodes that support the selected node

### 2 Usage

To use this plugin, within a GSN network, select a node and choose the relevant menu item:

The following screenshot shows an example of the applicable assumptions, contexts and models listing.
