# Resource Manager

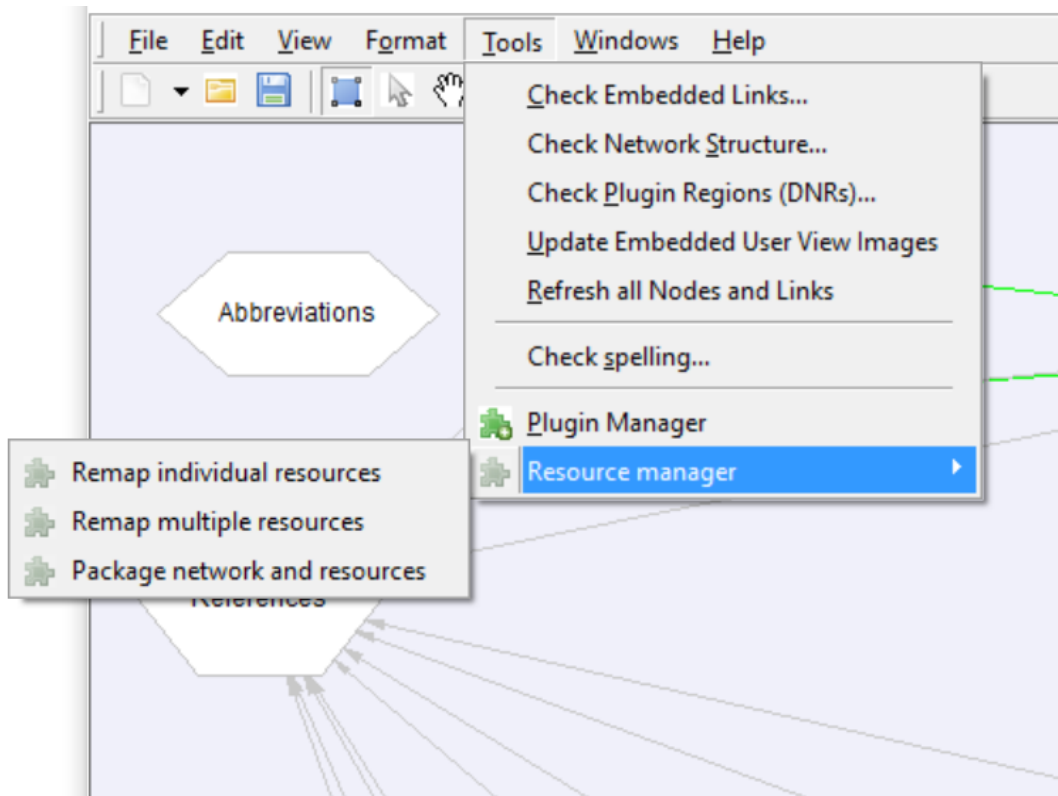

## Plugin Manual for ASCE 4.2

- File name: adelard resource manager.xml
- Version: 0.4.6
- Applies to: All networks

### 1 Description

Simplify the management and versioning of external files used by your ASCE network:

1. Remap individual resources - helps you to remap individual links to files (whether files used in DNRs or basic file hyperlinks) to point to new sources
2. Remap multiple resources - permits to remap several files by replacing any old path with a new path
3. Package network and resources - lets you package your ASCE network and all the files it links to, for taking a snapshot of your safety case and all the supporting evidence, archiving, zipping up for email, or burning to CD

## 2 Additional

For full details of the resource manager plugin see complete user guide.

## 3 For plugin developers

*For plugin developers only:* if you wish to write your own plugin in a way that the Resource Manager plugin can manage its resources - see Writing remappable plugins.
